About the Magazine

Mass, motion, forces, energy, design, and manufacturing—these comprise the world of mechanical engineering today. Continual research and development has led to better machines and processes culminating in key events and technological advancements, that have improved the 'quality of life' of mankind. Mechanical engineering is concerned with all aspects—design, development, construction, production, installation, operation and maintenance—of almost everything that we come across in our daily lives-be it a sophisticated jet engine or a simple toy. It is to acknowledge the growing importance of this field IUP has come up with a quarterly journal—The IUP Journal of Mechanical Engineering.
